

**Additional reptile records from Wongan Hills** — Two further reptile species were added to the known herpetofauna of the Wongan Hills area during the Darling Range Branch camp on 29-30 September 1990. Several *Ctenophonus maculatus griseus* were active and an adult male was caught by hand near the campsite 4km from Wongan Hills town. Near the bottom of Mt O'Brien an *Egernia multiscutata bos* skink was sunning itself near its burrow in gravelly soil.
